KN95 Face Mask

A step above a surgical mask that provides more respiratory protection than a surgical or cloth mask and that can be used in certain clinical settings. Five layers of high quality non-woven, hot air cotton using regulatory melt-blown fabric technology and rated to capture 95% of 0.3-micron particles. KN95 masks do a good job of preventing virus transmission and have strong breathability standards.

ASTM RATINGS - ASTM International sets the preferred standard in healthcare for best practices and requirements for performance and materials in masks. They follow FDA guidelines in the four main areas of Fluid Resistance, Differential Pressure, Filter Efficiency and Flammability.

Surgical Mask – ASTM Level 3 (3 Layer)

Level 3 provides maximum barrier protection for heavy levels of aerosols, spray and/or fluids. It has more protection than Level 2 against fluid transmission while still providing great comfort and breathability. Used for high-velocity procedures that protect both the patient and wearer from the transfer of bodily fluids, micro-organisms, and particulate matter.

Medical Mask – ASTM Level 3 (3 Layer) – with Visor/Shield

The same maximum barrier protection mask as the ASTM Level 3 Surgical – 3 Layer Mask but includes an eye visor that is attached with Velcro. The visor may be attached and detached as needed.

Medical Mask – ASTM Level 2 (3 Layer)

A moderate barrier protection mask for low to moderate levels of aerosols, spray and/or fluids. The difference in protection between a Level 2 mask and a Level 3 mask is minimal but it provides twice the protection from a Level 1. It is comfortable and provides good protection.
