

50 pcs per Box  
KN95 Face Mask

## Product Overview

A quality protective Face Mask that provides protection against airborne particles with an effective filtration rate of 95% or greater. Tested to filter small particles of 0.3 micron, these particulate respirators stand out from the rest with 5 Layers of protection. Designed to be easy to breathe through and for maximum comfort including an adaptable nose piece. Made with high quality non-woven, hot air cotton using regulatory melt-blown fabric technology. The ear strap is slightly wider in design making it soft and comfortable to wear.

## Use

A professional level protective device designed for any situation that involves airborne particles. An essential Face Mask to have when a higher level of particulate filtration is required. Commonly used in healthcare settings and medical first responders, but great to have in any emergency or for enhanced safety.

Eco's KN95 Face Mask can be used by anyone in contact with noxious vapors such as in construction or a workplace.

## Specifications

- Greater than 95% Filter Performance
- 5 Layers of Non-woven, Hot Air Cotton
- Melt-blown Fabric
- PM2.5 Fine Particle & Bacteria Resistance
- Safe and durable
- Good elasticity, low pressure ear loop
